But Banking and Financial Services IT Teams Face Significant Challenges

BUDGET PRESSURES

Hiring Freezes

Overextended Staff

Aging Hardware

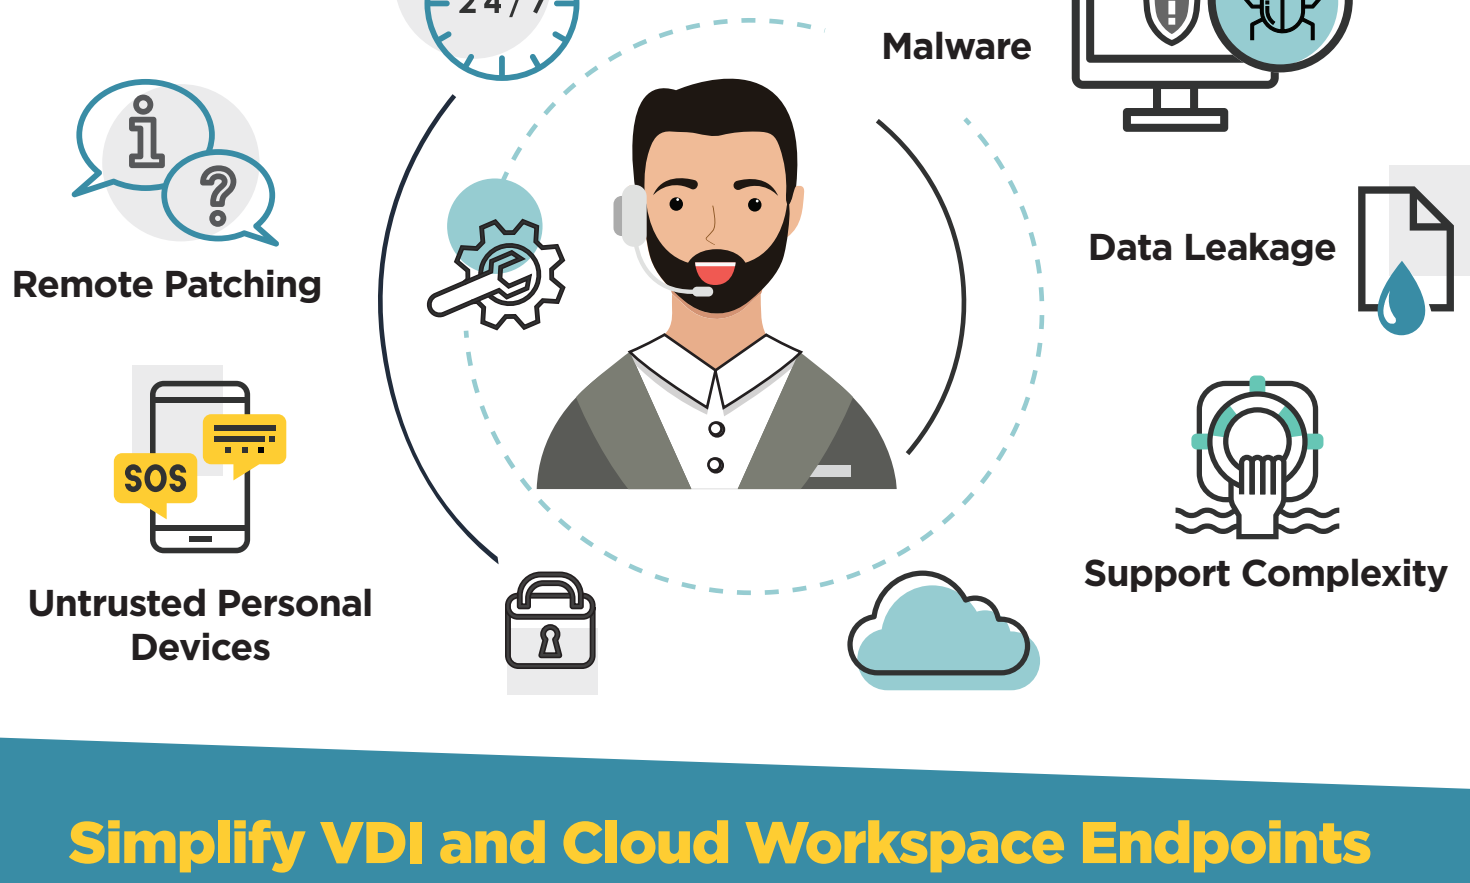

OPERATIONAL CHALLENGES

Complex Endpoint Patching and Management

Inconsistent User Experience

Growing Security Risks

Acceleration of Work-from-Home is Adding to the Pressure

Simplify VDI and Cloud Workspace Endpoints with IGEL

1 Shift Windows from Endpoints to the Data Center or Cloud

Windows is as important as ever to many banks and financial services firms. Moving it from endpoints to the data center or cloud simplifies management and keeps data centralized for better security.

2 Streamline endpoint deployment

Together, IGEL OS and the IGEL Cloud Gateway feature enable a simple, no-touch device deployment experience on both office and home networks.

3 Perform endpoint updates faster and more reliably

The IGEL Universal Management Suite (UMS) and IGEL Cloud Gateway (ICG) make updates fast and ultra-reliable, including a unique “buddy update” feature that speeds updates and conserves bandwidth from office, branch, or home.

4 Configure endpoints automatically based on context

IGEL-powered devices automatically adapt to unique banking and financial services locations and usage models based on pre-configured profiles defined by the IT team.

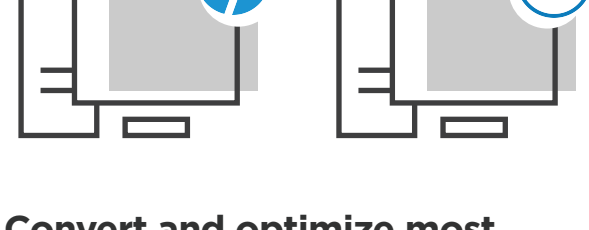

5 Deliver simple and efficient remote support

Secure shadowing enables technical support teams to assist at-home and remote users as though they were standing right next to them.

EXTEND THE LIFE OF EXISTING HARDWARE

IGEL helps banks and financial services firms extend the life of existing PCs and bring new devices from mergers and acquisitions under unified management quickly.

Convert and optimize most x86-64 devices to IGEL OS quickly and easily.

Boot legacy and unmanaged devices to a secure, managed workspace with UD Pocket

This helps banks and financial services move quickly and save money by deferring large hardware investments until they are truly necessary.

Simplify Endpoint Management with IGEL

Moving Windows workspaces and storage to the data center or cloud delivers immediate security and compliance benefits for banks and financial services firms. IGEL extends this added assurance to endpoints by creating a complete “chain of trust” from device boot to cloud workspace execution.

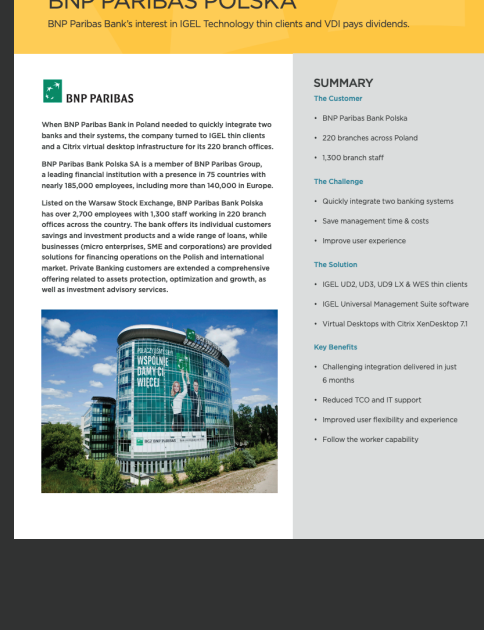

SUCCESS STORY: BNP PARIBAS

Learn how BNP Paribas used IGEL to:

- Complete a complex M&A integration in 6 months
- Reduce TCO and IT support burden
- Improve user flexibility and experience
- Add “follow the worker” capabilities
