IGEL Universal Management Suite Add-Ons.

IGEL Cloud Gateway

IGEL Cloud Gateway (ICG) extends the Universal Management Suite via a standard internet connection to endpoints running in remote branch offices, at home offiices or by roaming road warriors.

Whether based in the cloud or on the DMZ, IGEL Cloud Gateway seamlessly authenticates connection and transfers necessary data between the Universal Management Suite and the endpoint, without a VPN or leased line.

UNIFIED MANAGEMENT AGENT

IGEL has Revolutionized the Endpoint.

Our endpoint management software exists to make the life of IT easier.

We believe it should be as easy to remotely manage 10,000 devices as 10. That's why we continually optimize our Universal Management Suite (UMS) to add the functionality that's most important to the enterprise.

Our operating system unifies your endpoints and standardizes the user experience.

Imagine deploying a fully-branded access device that performs exactly as your organization requires. IGEL's profile approach delivers zero-touch deployment along with an intuitive, easy to use management interface.

IGEL's vision for the endpoint is also revolutionary.

We believe that you deserve an extremely configurable and secure device that enables users to connect to whatever virtual environment they need. IGEL's endpoint operating system, IGEL OS, provides a common experience for your users and ensures that they can maximize their productivity.

SIMPLE
IGEL shifts granular endpoint control from end users to IT.

- **Manage every Endpoint with granular control.** Achieve administrative authority over all endpoints with IGEL's unique profile-based endpoint management system. Get granular control of any device running IGEL OS or an IGEL Universal Management Agent.

- **Easy customization = No compromise.** Easily extend functionality through custom application partitions, partial updates, and corporate branding. Remove access to unnecessary and unrequired capabilities by "turning off" unused features.

- **Touch automation.** IGEL's profile approach makes it easy to set it and forget it. From click & drag profile updates and policy configuration, you can finally automate remote endpoint management. With just a couple of clicks, any changes are instantly applied to your selected directories.

SECURE
Enterprise-level security already built in.

- **Purpose-built for the enterprise.** The read-only file system ensures that every boot-up is safe. Two-factor authentication, smart card readers are already built-in.

- **UMS' touch deployment works at any scale.** IGEL includes built-in security and offers High Availability and Shared Workplace.

- **Custom partitions.** IGEL UMS lets you simply deploy custom solutions, no scripting needed. Remove access to unnecessary and unrequired capabilities by "turning off" unused features.

SMART
Do more with less.

- **Maximize return on IT investment.** IGEL Universal Desktop Converter installs IGEL OS onto existing assets, turning them into fully managed thin clients. You'll get the power, security and flexibility of virtualization without additional expenditure on hardware.

- **Get the full version of UMS, free.** IGEL includes the full version of UMS in every hardware or converter software. With this one-time purchase, you get the industry's best, continually updated management software.

- **Optimize your existing environment.** IGEL OS is optimized for the virtual environment. It will automatically integrate with your existing workflow and can easily adapt to future changes. You can even manage fat clients on the UMS by using the UMA.

Smart Solution.

IGEL OS™

IGEL OS revolutionizes access to virtualized desktops and applications. Currently in its 6th generation, this time-tested operating system standardizes your endpoints, provides for adaptive configuration and granular control, while giving users a familiar, trouble-free workspace.

Supporting more remote display protocols than any solution on the market, IGEL Linux 10 is purpose-built for enterprise access to virtual environments of all types.

Universal Desktop Converter™

The Universal Desktop Converter (UDC) enables you to repurpose existing hardware.

The UDC converts any compatible x86 device, regardless of manufacturer or form factor. Within minutes you can turn old devices into a universally deployable IGEL Linux-based thin client.

IGEL Universal Management Suite™

Universal Management Suite (UMS) has revolutionized endpoint management.

UMS makes it possible to have ONE integrated, low touch management system. Purpose-built to simplify complex enterprise environments, UMS supports diverse operating systems, databases and directories. This smart, simple and secure management software lets IT easily manage any remote endpoint.
