Healthcare endpoints are distributed and extremely costly to manage and maintain.

...and high spend doesn't equal high quality patient care with optimal outcomes.

Healthcare endpoints are a top target for cyber attacks. Hospitals are more vulnerable than any other type of organization. Outdated systems, lack of experienced cyber personnel, highly valuable data, and the added incentive to pay ransoms in order to regain patient data are magnetizing cyber criminals to the healthcare market.

CYBERSECURITY VENTURES, 2019 ALMANAC

THE 5 WAYS IGEL HELPS SIMPLIFY AND SECURE HEALTHCARE ENDPOINTS

1. Accelerate VDI and DaaS Adoption
   - Simpler Deployment
