

tricerat[®] + IGEL Better Together

Why Tricerat

When out-of-the-box functionality doesn't fit, **Tricerat** and **IGEL** work better together. Tricerat's technology is built for IGEL clients, so companies can achieve printing success, no matter the requirements.

Features

- » Cloud-hosted and server-based printing
- » Server-less printing
- » Improved session printing
- » DaaS/ClaaS support
- » UD, UD Pocket, and UDC support
- » Physical desktop and laptop printing
- » Printing in server-based applications and desktops

Benefits

No terminal, application server, or image print drivers to manage. Increase user productivity by speeding up logon times and eliminating spooler crashes. Less time spent managing print servers by reducing compatibility issues.

Cross Environment Compatibility

Tricerat works across multiple virtual platforms such as Linux, Citrix, Microsoft, VMware, Ericom, in addition to physical workstation environments.

Single Drag and Drop Console

Manage your enterprise wide printing from a single drag and drop console. No scripting, GPOs, or Profiles.

Advanced Print Features

Pass through all manufacturer's advanced print features for use in virtual sessions without installing drivers on all endpoints.

Automatically Enabled Printer Assignment

Automatically assign printers after installation. Administrators no longer have to be highly skilled in IGEL Profiles.

Proximity Printing/Print-On-The-Go

Give your users access to the printers they need, when they need them. Assign printers based on location, profile, or workstation.

Increased Server Performance

Improve system performance by reducing print spooler crashes and printing backups.
