

Simplify EUC Printing

Solution Brief

PrinterLogic enables IT professionals to eliminate print servers and centrally manage direct IP printing on any IGEL OS-powered endpoint device. With our centrally managed direct IP printing platform, you'll empower end users with all the features of enterprise print management using a secure, highly available, serverless printing infrastructure.

Simplify VDI Printing

Deploy printers based on user ID, device location, name, group and/or organizational unit (OU).

Eliminate Print Servers

Eliminate infrastructure costs, print-related WAN traffic, single points of failure, and management overhead.

Centralize Management

Centrally manage printers, drivers and profiles without requiring a separate printing infrastructure for VDI users.

Eliminate Scripting & GPOs

Deploy printers and push out updates with no scripting, GPOs or admin rights. Printer objects and profiles follow end users wherever they log in.

Deliver Native Drivers

Avoid driver conflicts in VDI server farms. Deploy and manage both native and universal drivers for any network printer.

Speed EUC Sales Cycles

Make VDI printing easy for end users and simple for IT to manage. Avoid printing challenges that slow the EUC sales cycle.

Solution Features

SaaS or Virtual Appliance

Advanced Reporting

Session Printing Auto-Deploy

Secure Release Printing

Self-Service Portal

Printer Redirection Support

PrinterLogic's enterprise print management software is a perfect fit with our next gen edge OS and our company direction as a whole."
