About UDS Enterprise

UDS Enterprise is a multiplatform connection broker for:

- VDI: Windows and Linux virtual desktops administration and deployment
- Windows and Linux app virtualization
- Desktop service consolidation
- Remote access to physical and virtual devices

In short, UDS Enterprise manages user access to IT resources in Data Center or Cloud.

Technical features

User access from any web browser and OS.

Service access via connection plugins, Java is not required, nor any other third-party software.

Two level cache system for virtual desktops that provides resources savings and user access without downtime.

WAN Security Access SSL. UDS Enterprise enables secure connections to virtual desktops via tunneler, without requiring a heavy client or third-party products.

Split authentication. It enables to define two types of users, one to access the system and another one to connect to the virtual desktop.

Deployment of virtual desktops on multiple storage systems. A single UDS Enterprise broker allows the establishment of different locations to host the desktop services to be deployed.

Management and deployment of VDI and vApp hosted in a public, private or hybrid cloud

through a pay-as-you-go model. Possibility of using desktops as a service (DaaS) without the need for hardware. Compatibility with Microsoft Azure and VMware vCloud.

Access to services at specific times. Desktops and virtual applications can be configured to be accessible at a specific time.

Task scheduling. Enables programming processes like increasing/decreasing virtual desktops' cache and creating new publications.

Scalable platform. UDS Enterprise supports high availability configurations, which allows to deploy several broker and tunnel servers in active/active mode.

Unlimited configuration possibilities. UDS Enterprise allows the definition of configuration variables at two levels and the incorporation of new modules through SOA architecture.

Unlimited services management. UDS Enterprise is able to manage services such as: Voice over IP, Cloud Services, eLearning, IP Cameras, Remote File Storage... and any IP service.

Reports on the use of the platform. The system automatically creates reports on the use of the different deployed services (desktops and virtual applications), lists and users accesses to UDS Enterprise.

BYOD support. It allows users to access from tablets and smartphones by RDP via HTML5.

Virtual desktops and applications with Moodle.

UDS Enterprise is the first software that enables access to virtual desktops and applications through Moodle.

PCs optimization with OpenGnsys. UDS

Enterprise and OpenGnsys integration enable the access to PCs from anywhere and using any device.

Functionalities

Windows and Linux desktops native support. Enables the deployment of the following OS:

Windows OS

Windows 10 Windows 8.1 Windows 7 Windows 8 Windows 2019 Windows 2016 Windows 2012 Windows 2008

Linux OS

Ubuntu Fedora Debian distros CentOS openSUSE

Application virtualization. Applications deployment using the following providers:

- Windows Server (RDS):
 - Windows 2019
 - Windows 2016 R2
 - Windows 2012 R2
- Linux (Ubuntu / Debian

Multiple hypervisors and service providers: The support of multiple hypervisors and service providers allows to choose the one that best suits your needs or set up some of them simultaneously.

Supported hypervisors and service providers:

- Citrix XenServer
- Microsoft Azure
- Microsoft Hyper-V
- **Nutanix Acropolis**
- oVirt KVM, RHEV KVM
- Proxmox
- VMware vSphere
- VMware vCloud
- OpenStack
- OpenNebula
- **OpenGnsys**

Enterprise Multi-protocol. UDS allows the connection to desktop services using multiple protocols simultaneously.

- RDP for Windows and XRDP for Linux
- **RDS**
- RemoteFX
- **RGS**
- NX
- SPICE (KVM)
- Teradici PCoIP
- X2Go

Multi-authenticator. UDS Enterprise enables the assignment of desktop services from several sources simultaneously and with unlimited configurations.

Supported authentication systems:

- **Active Directory**
- Azure Active Directory
- **LDAP**
- **OpenLDAP**
- eDirectory
- SAML
- CAS
- Internal authentication system
- Authentication system per device (IP)

Open Source based. UDS Enterprise enables to add new hypervisors, service providers, authenticators and connection protocols.

Connection to persistent devices and terminal server. The connector of physical machines allows the connection to persistent devices and makes it possible to use them as terminal servers.

Support and professional services

Virtual Cable sells UDS Enterprise through a subscription model based on the number of users, including product support and updates.

In addition, Virtual Cable offers professional services to install and configure UDS.
