BENEFITS OF IGEL OS 11 SUBSCRIPTION LICENSING

SIMPLIFYING THE ACQUISITION OF IGEL SOFTWARE

At IGEL, our goal is simple: To transform the way the world works, creating better outcomes for people, organisations, and our planet. We seek to achieve this goal by empowering our customers with a streamlined, modern, and productive workspace with IGEL OS and our ecosystem of enterprise software, VDI and DaaS clients, and unified communications integrations. An essential next step on our journey is to offer our customers the opportunity to easily acquire IGEL OS and support, to get the most value out of their investment, and evolve with ongoing product developments. The path to achieve this is a subscription plan, offering greater choice and control, and aligning with your evolving needs.

Flexible Support Options
Choose the offering with the support level that best fit your business needs. Accessing support services ensures IT administrators have an extra level of confidence and assurance for their end user computing environment.

Simplified License Handling and Management
Fewer options offering more functionality help to make license handling easier for IT administrators and finance teams. The simplified SKU structure replaces individual order codes for advanced features, software maintenance, and support, greatly reducing the total number of licenses needed for full functionality. The IGEL License Portal (ILP), supports the migration of the legacy licensing structure to the all subscription model.

Enhance Your Existing License Investment
By migrating your IGEL OS licenses to the new subscription plan, you retain the value of your original investment and benefit from gaining the advanced features of Enterprise Management Pack, support, and maintenance with a transparent and economical pricing model. Every effort and attention have been placed on enabling our customers with an easy and beneficial transition to IGEL OS 11 subscription.

Today and into the future, integrated IGEL software and support subscription enables a more streamlined acquisition and procurement process. This allows for frictionless interaction with IGEL at the most optimal cadence for your business.
